Professional Summary

- Full-Stack Developer (My main focus is frontend development) with 5+ years of experience designing, developing, and maintaining web applications.
- Proficient in JavaScript, React.js, Next.js, Node.js, and NoSQL databases.
- Passionate about building scalable and user-friendly applications that deliver real impact.

EXPERIENCE

Dating Telegram Bot | Jun 2025 - Present

Self-employed - On-site

- Designed and developed a high-performance, multilingual Telegram dating bot capable of handling thousands of concurrent users with advanced matching algorithms.
- Implemented in-bot notifications, queuing systems, Redis caching, and Protocol Buffers to ensure fast response times and scalable architecture.
- Built end-to-end features from scratch, focusing on reliability, speed, and user experience, while maintaining high performance under heavy load.

Stack | Node.js, Express, MongoDB, Redis

rad-company-website | Feb 2026 - Feb 2026

Rad - Remote

- This is a comprehensive corporate website developed for Rad Company, a multi-service firm based in Armenia. The company provides a wide range of services including real estate consulting, Armenian residency card processing, visa applications, embassy appointment booking, education consulting, business setup (company registration), job placement assistance, and international relocation support. The platform is designed to serve both local and international clients with multilingual capabilities and user-friendly navigation. The website presents detailed service information, structured inquiry forms, and a clear conversion-focused layout to generate qualified leads. Built with Next.js for high performance and SEO optimization, styled with Tailwind CSS for a modern and responsive UI, and powered by a Node.js/Express backend with MongoDB for scalable data management and service handling.

Stack | Next.js Node.js Express MongoDB

rad-company-telegram-mini-app | Feb 2026 - Feb 2026

Rad - Remote

- This is a comprehensive Telegram bot and mini-app designed for providing residency services in Armenia. The platform offers various residence packages and includes a professional admin panel with advanced features. The admin panel features comprehensive analytics, user management system, direct messaging to users (both in-app and through Telegram), and broadcast messaging capabilities. Administrators can edit residence packages, create discount campaigns, and monitor all user activities. The mini-app includes an AI-powered internal chat system for customer support, providing intelligent responses to user inquiries. Built with Next.js and Tailwind CSS for the frontend, and Node.js/Express with MongoDB for the backend, ensuring a robust and scalable solution.

tour-stay-booking-website | Jun 2026 - Jun 2026

Araks - Remote

- This is a comprehensive booking website for a travel company offering tour, accommodation, and transfer services in Armenia. The platform is designed to serve an international audience with support for 10 different languages and 5 currency options. The website features a powerful admin panel that allows administrators to add, edit, and delete tours, accommodations, and transfer services. The system provides complete control over all service offerings, pricing in multiple currencies, and content management in all supported languages. Built with Next.js for optimal performance and SEO, styled with Tailwind CSS for responsive design, and powered by Node.js/Express backend with MongoDB for robust data management.

Full-Stack Mobile App Developer | Kotlin & Node.js | Dec 2024 - Jun 2025

Self-employed - On-site

- Developed a full-featured dating app from scratch using Kotlin and Node.js, implementing real-time messaging, advanced matching algorithms, and multilingual support.
- Integrated Redis, WebSockets, Protocol Buffers, and queuing systems to ensure high performance, real-time updates, and scalable architecture under heavy user load.
- Built core features including explore with advanced filters, messaging with text, voice, image, video calls, typing indicators, message editing/deletion, profile management, and customizable notifications, achieving 10,000 users within two months of launch.

Stack | Kotlin, Node.js, Express, MongoDB, Redis, Socket.IO, ProtoBuffer

Full-Stack Link-in-Bio Platform (Linktree-Style) | Sep 2024 - Dec 2024

Self-employed - One-site

- Developed a full Link-in-Bio platform using Node.js and Next.js, enabling users to create fully customizable personal pages with dynamic routing.
- Implemented modular sections such as social links, messengers, sliders, banners, Q&A, and more, with full support for drag-and-drop ordering, inline editing, and persistent server-side updates.
- Built an advanced theming system allowing users to change colors, animations, and fonts, while ensuring a smooth and responsive user experience across all devices.

Stack | Next.js, Node.js, Express, MongoDB

Web Development Instructor (Online) | HTML, CSS, JS, React | Oct 2022 - Sep 2024

Self-employed - One-site

- Taught HTML, CSS, JavaScript, and React.js online for two years, delivering both free and paid courses to over 1,000 students.
- Designed engaging, hands-on lessons and projects to help students build real-world web applications and improve practical coding skills.
- Provided ongoing support, mentorship, and feedback to students, fostering a strong learning community and ensuring high course completion rates.

Stack | Next.js, Node.js, Express, MongoDB
